Loading Instructions

When the WorkBench hand symbol appears, insert the PowerStyx disk in your internal disk drive.

PowerStyx has 15 different levels. To advance to the next level you must either-

1. Expose at least 75% of the screen
2. Catch all the letters in one level.
3. Catch the "door" symbol.

Game Play

Use the Crystal to cut sections out of the empty screen. You control the Crystal with the joystick. Use the firebutton to cut new sections. When the joystick button is released, you can travel on the existing lines. When using the firebutton, you are free to cut sections out of the empty screen, but be careful not to be too greedy because there are MONSTERS that try to punch your ticket. The ones inside the screen area will kill you by touching you. The ones outside the screen area can kill you if they cross a line you have started to draw (cut) but have not yet finished. Sometimes

letters of the alphabet will appear on the screen. If you can cut out the section underneath it, you have captured it. If you capture all of them, they form a word. After that you advance to the next level.

There are also objects moving around on the screen. If you capture one, you will receive its magical power. They are as follows -

HEART - Gives you an additional Crystal (life)

CROSS - Takes away a life

TUBE - Gives you more speed

CLOCK - Gives you more time.

DOOR - Advances you to the next level.

Moneybags are worth 100, 200 or 500 points.

The Question Mark (?) will randomly select one of the above magical powers for you (but not the DOOR. Sorry for that).

You can pause with the SHIFT key.

Each one (1) percent increment of the screen is worth 10 points.
